Business sentiment in Russia continuing it's recovery in May

Fig. 1: DBCI Russia May | June 2016 „Index“ rolling 12 months, n=17

- Since the last survey in March 2016 the Digital Signage Business Climate Index has further followed its positive trend and increased by 6,68 base points from 31,55 base points to 38,23 base points.
- As the current business situation is not rated as positive as in March, at the same time expectations for the near future have increased dramatically to an optimistic outlook. Now more than two thirds of all polled companies expect a *more unfavourable* situation for their business within the next six months.
- The business sentiment in May has steadied the drastic change from a slightly negative to a good business sentiment since the turn of the year. In general the Russian IT market seems to have left the lowest point of the economic slowdown behind. This was reflected in a general sales increase in the LFD market and in new digital signage project developments.
- Most Digital Signage solutions have been reliant on Windows as OS in 2015. However Linux based solutions are increasingly implemented

Participants: n=17; Region: RU; Survey Period: 2016 calendar weeks 20-21

Satisfied current business situation & outlook markedly increased

Current business Situation | Russia | May/June 2016

Windows in first, Linux challenges & Android picks up speed

Question: How high was the percentage of operating systems used in Digital Signage Projects in 2015?

Windows is implemented most frequently with Digital Signage projects. However other operating systems have significantly gained ground in the last two years.

Particularly Linux based installations are becoming more and more popular. Here cost and security issues are dictating the decisions. With Digital Signage installations becoming more varied in size and required performance, the appliances running on a non-PC architecture like Raspberry Pi, Cisco, BrightSign, Spinetix etc. are more widely integrated.

Cost effective systems operating on Android or SoC basis currently have the highest dynamic in the market. Still many security and performance issues remain.

Apple operating systems could establish a robust nice segment. However, many managers with IT responsibility dismiss it as an operating system for Digital Signage installations.

Market share of IT operating systems in Digital Signage installations 2015
